

# GLOBAL FREEDOM MISSION

Empowering Communities through Regenerative Agriculture and Clean Water Development

## Mission Statement

Global Freedom Mission (GFM) empowers people to break free from poverty through sustainable community projects that restore land, create jobs, and provide access to clean water.

## Problem

In many rural regions of Pakistan, families struggle to survive without reliable income, safe drinking water, or sustainable land access. Generational poverty and water scarcity have crippled communities' ability to thrive. Traditional aid helps temporarily — but long-term freedom comes from opportunity.

## Our Solution

GFM is building self-sustaining development sites that combine clean water wells, regenerative agriculture, and fair-wage job creation. These projects empower families to move from survival to stability while restoring the environment.

Each project integrates:

- Clean water wells to provide safe access for villages and farms
- Land development for regenerative agriculture
- Fair-wage job creation through local farming and training
- Community empowerment through practical education

## Impact Goals (2025–2027)

- Provide clean water to over 20,000 people
- Create hundreds of sustainable jobs
- Purchase and develop land for regenerative farming
- Launch two pilot regenerative agriculture and water access sites by 2026

## Funding Ask

Total Round: \$250K–\$500K

Ask from Cisco Foundation: \$100K–\$250K

Funds will be used to purchase land, drill wells, and establish regenerative farming systems that create lasting opportunity.

## Why Cisco's Support Matters

Cisco's investment will directly advance climate resilience, clean water access, and sustainable livelihoods — transforming entire communities with technology, opportunity, and dignity.
